

The figure displays a large, interconnected network of protein-protein interactions. The nodes are color-coded into several clusters: blue (top left), red (top right), purple (middle left), green (middle), yellow (bottom right), and pink (bottom left). The edges represent the interactions between these clusters, forming a dense web of connections. The network is highly complex, with many nodes having multiple interactions, and the clusters are well-mixed, indicating a high degree of connectivity between different groups of proteins.
